DETAILED ACTION

1. Claims 1-3 are pending and are considered below.

Claim Objections

2. Claim 3 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 3 fails to further limit independent claim 1 because claim 1 already claims to have a method to debug in more than one programming language.

Specification

3. The abstract of the disclosure is objected to because it is more than one paragraph. Second paragraph has no technical disclosure and should be removed. The paragraph numbers need to be deleted. Correction is required. See MPEP § 608.01(b).
4. The disclosure is objected to because of the following informalities: In specification applicant fails to spell out all acronyms (i.e. Xscript, XML, JSR 45, etc.).

Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

Art Unit: 2194

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Bogle et al (US Patent 6, 353, 923).

Claim 1:

A method for debugging in more than one programming language [Column 4, lines 10-13 "The method for debugging a multiple language application"], comprising:

Providing an interface with a debugging frame for each language [Column 8, lines 1-3 "having multiple interfaces"]; and

Allowing a user to edit each language in a debugging frame [Column 11, lines 47-49 "object codes associated with an appropriate language engine"].

Claim 2:

A method according to claim 1, further comprising:

Providing the capability to interpret multiple languages within a single source file [Column 12, lines 53-57] and allow each of the multiple languages to be displayed in a debugging frame [Column 12, lines 30-33].

Claim 3:

A method according to claim 1, further comprising:

Providing the ability to support additional languages [Column 4, lines 10-13 "The method for debugging a multiple language application"].

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

"Investigating Multilanguage Debugging and the New IDEs of Visual Studio 97" – discloses Multilanguage debugging.

"Getting to Know gdb" – discloses debugger with more than one language.

"Generalized Path Expressions: A High Level Debugging Mechanism" – discloses a Multilanguage debugger.

"Multilingual Debugging Using a Compiler" – discloses a Multilanguage debugger.

Carter (US Patent 5,845,121) – discloses a Multilanguage debugger.

"VAX DEBUG: An Interactive, Symbolic, Multilingual Debugger" – discloses a Multilanguage debugger.

Bickson et al (US PGPUB 2006/0064677) – discloses debugging programs in multiple programming languages.
